METHOD AND APPARATUS FOR INTERFACING
WITH A DISTRIBUTED COMPUTING SERVICE

5

ABSTRACT

A method, system, and apparatus is disclosed for interfacing with a distributed computing service. A semantic interpretation specification can be accessed that describes a behavior used to interface with the distributed computing service. The semantic interpretation specification is entered into a rules engine. A set of procedures is obtained from the rules engine for interacting with the distributed service. An interface with the distributed computing service can be formed using the set of procedures.
